Foreword by The Vice Chancellor

Assalammualaikum Warahmatullahi Wabarakatuh and greetings.

I extend heartfelt congratulations and a warm welcome to each of you as you embark on your academic journey with us. Your decision to join UTHM marks a significant milestone, and I am deeply honoured by your trust and commitment.

As an academic institution, we not only recognize the importance of the intertwined dimensions of economic, social, and sustainability (ESG) factors in the post-pandemic era but also embrace our responsibility to actively contribute to their advancement. Our commitment is unwavering as we strive to strengthen our core business pillar by focusing on various crucial aspects.

Firstly, we are dedicated to enhancing our academic delivery to ensure our students receive the highest quality education in today's rapidly evolving world. This commitment involves continually refining our curriculum, integrating innovative teaching methods, and cultivating critical thinking skills. Our aim is to equip students with the knowledge and capabilities needed to effectively address complex societal challenges. Secondly, we place significant emphasis on research efforts that contribute to sustainability objectives. By fostering a culture of interdisciplinary collaboration, we strive to generate pioneering research and innovative solutions that tackle pressing economic, social, and environmental issues. Our goal is to make meaningful contributions to the sustainable development of both local and global communities.

In addition to our core priorities, we actively enhance our impact by engaging with diverse stakeholders. Through partnerships, community outreach programs, and knowledge exchange initiatives, we aim to extend our positive influence beyond our institution. By leveraging our expertise and resources, we seek to address societal needs, promote inclusive growth, and enhance well-being. Furthermore, our efforts are guided by a commitment to good governance. We uphold the highest standards of transparency, accountability, and ethical practices. By fostering responsible decision-making and cultivating a culture of integrity, we aim to create an environment that builds trust, encourages collaboration, and ensures the long-term sustainability of our institution.

In summary, our dedication centers on achieving dynamically synergistic sustainability. We reinforce our core business pillar through enhanced academic delivery, impactful research endeavours, and enriched services. Upheld by our unwavering commitment to good governance, we believe these principles empower us to actively contribute to shaping a more sustainable and resilient future for all.

Lastly, but certainly not least, I extend a heartfelt welcome to all new students. I invite you to become valued members of our community. As you embark on this transformative journey, rest assured that my commitment is to ensure your experiences are enriching and enjoyable. Additionally, I sincerely wish you success in all your endeavours as you navigate this educational path.

"With Wisdom, We Explore"

Best wishes.

PROFESSOR. DR. MAS FAWZI BIN MOHD ALI
Vice-Chancellor
Universiti Tun Hussein Onn Malaysia

Foreword by The Deputy Vice Chancellor (Academic and International)

Assalammualaikum Warahmatullahi Wabarakatuh and Salam Sejahtera, Salam Malaysia Madani.

Firstly, congratulations and a warm welcome to all new students joining Universiti Tun Hussein Onn Malaysia (UTHM) for the academic session 2025/2026. Rest assured, at UTHM, we stand out with unique qualities and offerings that set us apart from others. We are fully committed to upholding our promises and ensuring you receive an exceptional educational experience. We are committed to your success with unwavering dedication, striving tirelessly to exceed your expectations.

Secondly, I extend my gratitude and congratulations to the Centre for Academic Development and TVET (CAD) and the faculties for their successful publication of this academic proforma. It is indeed a valuable resource that offers concise information about the various programs available. This proforma offers concise information about the various programs available and serving as a guiding tool for students, as well as assisting them in effectively planning their learning journey. By providing essential details and insights, it empowers students to make knowledge-based decisions and navigate their educational paths with clarity.

In addressing the nation's academic priorities, the Ministry of Higher Education Malaysia (MoHE) has recently initiated enhancements to academic infrastructures and infostructures, as well as emphasizing digitalization. These efforts are geared towards achieving conducive, safe, efficient, and high-quality education, while maintaining innovation, flexibility, and global competitiveness.

Additionally, to sustain students' interest and enrolment, several impactful steps are being taken, including hybrid programs and shortening the duration of study. Therefore, as an institution under MoHE, please anticipate our efforts toward these beneficial programs. Furthermore, we remain agile and committed to promoting Technical and Vocational Education and Training (TVET)-based academics as part of our vision to transform into a Global Technopreneur University (GTU) by 2030.

From our specific perspective, it is crucial to enhance, strengthen, and uphold our own programs and human capital. All our programs, totaling 110, are accredited by the Malaysian Qualification Agency (MQA) and their respective professional bodies. This accreditation is maintained through our qualified staff, both academic and non-academic, who undergo continuous upskilling and reskilling initiatives.

In conclusion, I sincerely hope that the initiatives implemented by UTHM will offer you invaluable experiences in exploring and acquiring competencies. With the introduction of this proforma, I envision outstanding academic accomplishments and success for each of you. This stage signifies a pivotal opportunity for you to positively impact both our nation and the global community.

Best wishes,

PROFESSOR DR. SHAHRUDDIN BIN MAHZAN @ MOHD ZIN
Deputy Vice Chancellor (Academic and International)
Universiti Tun Hussein Onn Malaysia

Foreword by The Dean

Assalamualaikum Warahmatullahi Wabarakatuh and Greetings,

Congratulations and thank you for choosing the Faculty of Electrical and Electronic Engineering (FKEE), Universiti Tun Hussein Onn Malaysia (UTHM).

FKEE UTHM is one of the most well-equipped engineering faculties, providing cutting-edge teaching and research facilities. With over 1,400 students from Malaysia and other countries enrolled in our undergraduate and postgraduate programs, we are proud of our diverse and inclusive academic community.

Our faculty is supported by a dedicated team of more than 140 academic staff, more than 30 assistant engineers, and administrative personnel. All of our academic programs are accredited by the Malaysian Qualifications Agency (MQA) and the Engineering Accreditation Council (EAC), ensuring the highest educational standards.

Beyond classroom learning, FKEE offers valuable opportunities for upskilling through specialized training programs, as well as outbound mobility programs, allowing students to gain global exposure and enhance their educational experience. These initiatives are designed to help you develop both technical and personal skills that will benefit you in your future career.

Everyone at FKEE shares a common goal of making a positive difference in the world, inspired by the philosophies of "continuous learning and improvement" and "giving is the best communication." At FKEE, we not only focus on electrical and electronic engineering but also on shaping well-rounded individuals who will contribute meaningfully to society.

This booklet provides important information about the Bachelor of Electrical Engineering with Honours (BEV) program and details the courses you will take throughout your studies. Remember, success is a journey, not a destination. During this journey, you will be surrounded by a conducive, positive, and dynamic environment.

Take advantage of this opportunity to utilize our modern laboratories, where you can develop practical skills and apply theoretical concepts.

In short, this is your journey and your chance. Give it your best shot, embrace the learning curve, and make the most of the opportunities available to you, including upskilling and outbound mobility programs.

On behalf of FKEE, I wish you all the success in your studies!

PROF. TS. DR. ASMARASHID BIN PONNIRAN
Dean
Faculty of Electrical and Electronic Engineering
Universiti Tun Hussein Onn Malaysia

Vision

To be a global technical university in sustainable technology and transportation

Mission

Provide technical solution for industry and community based on tauhidic paradigm

Education Philosophy of University

UTHM education and training, founded on the tauhidic paradigm, strive to produce competent, professional and entrepreneurial graduates, driven by advanced technologies for global development.

Logo of University

The logo of UTHM displays a proton, a book, a tiered mortar board (levels of learning), a book-rest and a shield.

Symbolism:

- Red — Bravery
- Blue — Collaboration
- Silver — Quality/ Prestige
- Book-rest — Knowledge
- Proton — Science and Technology
- Book — Knowledge
- Mortar board — Levels of study
- Circle — Resilient and related to global characteristics
- Shield — Confidence

The whole concept of the logo represents UTHM as a learning institution that supports knowledge expansion and development at all levels of study in science and technology.

Blue represents the close relationship among UTHM community in ensuring successful and resilient implementations of the University programmes as well as its education and research activities that are carried out for the benefit of mankind.

Red symbolises the adventurous nature of UTHM in exploring new fields to establish itself as a leader in the applications of science and technology. Thus, this reflects the spirit and self-esteem of the UTHM community.

Faculty of Electrical and Electronic Engineering

Faculty Background

The Faculty of Electrical and Electronic Engineering (FKEE) was established on 1st May 2004. The Faculty consists of four departments namely:

1. Department of Electronic Engineering (JKEN)
2. Department of Electrical Engineering (JKEK)
3. Department of Graduate Studies (JPSS)
4. Department of Laboratory and Asset Management (JPMA)

The Faculty also has two Centre of Reseach (CoR) known as Advanced Telecommunication Research Center (ATRC) and Electric Vehicle Research Center (EVRec). There are two Centre of Excellence (CoE) at UTHM associated with the Faculty:

1 Research Center for Applied Electromagnetics (EMCenter)
2 Microelectronics & Nanotechnology Shamsuddin Research Centre (MiNT-SRC)

Currently, there are various focus groups that play pivotal role towards research culture establishment in FKEE. The list includes the following:

1 Green and Sustainable Energy (GSEnergy)
2 Koordinasi Insulasi dan Voltan Tinggi (KVolt)
3 Power Electronics, Drives and Machines (PEDM)
4 Power Integration System (PI Sys)
5 Instrumentation and Sensing Technology (InSeT)
6 Mechatronic and Control Research Group (MCRG)
7 Group of Robotics Engineering and Technology (GREaT)
8 Computational Signal, Image and Intelligence (CSII)
9 Internet of Things (IoT)
10 Electronic and System Design (ESD)
11 Electroencephalogram and Human Potential (EEG)
12 BioMedical Engineering and Measurement System (BioMEMS)
13 VLSI and Embedded System Technology (VEST)
14 Advanced Medical Imaging and Optics (AdMedic)
15 Advanced Sensing Device and Technology (ASDT)
16 Optical Communication and Artificial Intelligence (OCAI)
17 RF and Microwave Devices (RFMD)
18 Wireless and Propagation (WaP)

The Faculty offers Undergraduate and Postgraduate programmes in both Electrical and Electronic Engineering. These programmes have been designed to cater all the stakeholders needs where the produced graduates are technically competent in their respective engineering field but also possess outstanding soft skills. The faculty offers the following programmes:

1 Bachelor of Electronic Engineering with Honours (BEJ)
2 Bachelor of Electrical Engineering with Honours (BEV)
3 Bachelor of Electronic Engineering (Robotics And Artificial Intelligence Systems) With Honours (BEA)
4 Bachelor of Electronic Engineering (Semiconductor and Integrated Circuit Design) With Honours (BES)
5 Master in Electrical Engineering (Coursework) (MEE)
6 Master in Electrical Engineering (Research) (KEE)
7 Master of Science in IoT (MET)
8 Doctor of Philosophy in Electrical Engineering (PEE)

FACULTY OF ELECTRICAL AND ELECTRONIC ENGINEERING

Vision

To be a global technical university in sustainable technology and transportation.

Mission

Provide technical solution for industry and community based on tauhidic paradigm.

Direction

UTHM as a Global Technoprenuer University 2030 (#GTU2030).

Motto

With Wisdom, We Explore.

Quality Policy

Universiti Tun Hussein Onn Malaysia is committed to offer high quality academic programmes grounded in Engineering, Science and Technology to meet the needs of its stakeholders through an outstanding quality management system in line with the ISO 9001: 2015.

FKEE Quality Objectives

FKEE staff is committed to carrying out their responsibilities to ensure that the quality objectives of the current year are achieved, monitored and reviewed in tandem with the vision and mission of the University.

1 To ensure that students enrollment exceeds the 90% target.
2 To ensure that international students enrollment exceeds 6% of the total current enrollment.
3 To ensure that new research grants exceed RM1.9 million per year.
4 To ensure that the university H-Index (SCOPUS) increases by 1 index value each year.
5 To ensure that Graduate Employability after 6 months of graduation exceeds 80%.
6 To ensure that any complaints related to the teaching and learning system or equipment are resolved within a period of not more than 6 months.

Specialisation Area: Mechatronic and Robotic Engineering (BER)

Professor Ts. Dr. Elmy Johana binti Mohamad
PhD (Electrical Engineering) (UTM)
MEng Electrical – Mechatronics) (UTM)
BEng (Electrical) (KUiTTHO)

Associate Professor Dr. Rosli bin Omar
PhD (Autonomous System) (University of Leicester)
MEng (Electrical) (UTM)
BEng (Electrical – Instrumentation & Control System) (UTM)

Associate Professor Ir. Dr. Tee Kian Sek
PhD (Mechatronics) (University of Leeds)
BEng (Electrical – Mechatronics) (UTM)

Associate Professor Ir. Ts. Dr. Mohd Razali bin Tomari
PhD (Computer Vision and Robotic) (Saitama University)
MSc (Intelligent System) (UPM)
BEng (Electrical – Mechatronic) (UTM)

Associate Professor Dr. Jamaludin bin Jalani
PhD (Robotik) (University of Bristol)
MSc (Mechatronic) (IIUM)
BEng (electrical & electronic) (Leeds Metropolitan University)
Dip. (Electronic) (UTM)

Associate Professor Ir. Dr. Chia Kim Seng
PhD (Electrical Engineering) (UTM)
BEng (Electrical – Instrumentation & Control) (UTM)

Associate Professor Dr. Abu Ubaidah bin Shamsudin
PhD (Robotics) (Tohoku University)
MEng (Mechatronic) (UIA)
BEng (Electrical & Electronic) (UTHM)

Associate Professor Ir. Dr. Herdawatie binti Abdul Kadir
PhD (Control and Robotic) (USM)
MEng (Electrical – Mechatronic) (UTM)
BEng (Electrical) (UTM)

Ts. Dr. Ain binti Nazari
PhD (Electrical, Electronic and System Engineering) (UKM)
MEng (Electrical – Mechatronics & Automatic Control) (UTM)
BEng (Electrical) (UTHM)

Ir. Dr. Budiman Azzali bin Basir
PhD (Control System and Digital Electronics) (UTM)
MEng (Mechatronic Engineering) (UTM)
BEng (Mechatronic Engineering) (UTM)

Dr. Hisyam bin Abdul Rahman
PhD (Electrical Engineering) (UTM)
BEng (Electrical – Mechatronic) (UTM)

Dr. Mohamed Najib bin Ribuan
PhD (Mechatronics) (Okayama University)
MSc (Mechatronics) (Newcastle University)
BEng (Electrical– Mechatronics) (UTM)

Ts. Dr. Mohammad Afif bin Ayob
PhD (Electrical Engineering) (UTHM)
MEng (Electrical) (UTHM)
BEng (Electrical) (UTHM)

Dr. Mohd Fadzli bin Abd Shaib
PhD (Electrical Engineering) (UTM)
MEng (Electrical) (UTM)
BEng (Electrical & Electronics) (UNITEN)

Dr. Mohd Hafiz bin A. Jalil @ Zainuddin
PhD (Electrical Engineering) (UiTM)
MEng (Electrical – Mechatronics) (UTM)
BEng (Electrical) (UiTM)

Dr. Noor Azizi bin Mardi
PhD (Control System Engineering) (RMIT University)
BEng (Aerospace Engineering) (University of Minnesota)

Ir. Dr. Noorhamizah binti Mohamed Nasir
PhD (Electrical Engineering) (UTHM)
MEng (Electrical) (UTHM)
BEng (Electrical) (UTHM)

Dr. Rafidah binti Ngadengon @ Ngadungon
PhD (Electrical Engineering) (UTM)
MEng (Mechatronics) (UTM)
BEng (Communication) (Kitami Institute of Technology)

Dr. Rohaida binti Mat Akir
PhD (Electrical and Electronic Engineering) (UKM)
MEng (Electrical – Electronic and Telecommunication) (UTM)
BEng (Electrical - Telecommunication) (UTM)

Ts. Mohamad Fauzi bin Zakaria
MEng (Control & Automation) (UPM)
BEng (Electrical) (UTM)

Ts. Reza Ezuan bin Samin
MEng (Electrical) (UTHM)
BEng (Electronics) (USM)

Specialisation Area: Microelectronic Engineering (BEM)

Professor Ts. Dr. Mohd Khairul bin Ahmad
PhD Engineering (Electronic) (Shizuoka University)
MEng (Electrical) (UiTM)
BEng (Electronic) (Gunma University)

Professor Dr. Nafarizal bin Nayan
PhD Engineering (Electrical Engineering) (Nagoya University)
MEng (Electronic) (Nagoya University)
BEng (Electrical and Electronic) (Nagoya University)

Associate Professor Dr. Fariza binti Mohamad
PhD Engineering (Functional Materials Engineering) (Toyohashi University of Technology)
MEng (Electrical & Electronic) (Toyohashi University of Technology)
BEng (Electrical & Electronic) (Toyohashi University of Technology)

Associate Professor Dr. Marlia binti Morsin
PhD (Micro Engineering & Nano Electronic) (UKM)
MEng (Electrical) (KUiTTHO)
BEng (Computer Engineering) (UTM)

Associate Professor Dr. Nabihah@Nornabihah binti Ahmad
PhD (Electronic Engineering) (Massey University)
MEng (Electrical) (KUiTTHO)
BEng (Electrical and Electronic) (UKM)

Dr. Intan Sue Liana binti Abdul Hamid
PhD (Microelectromechanical) (USM)
MEng (Electrical) (UTHM)
BEng (Microelectronic) (UKM)

Dr. Jais bin Lias
PhD (Electronic Engineering) (Nagaoka University of Technology)
MEng (Electrical, Electronic & Information Engineering) (Nagaoka University of Technology)

PROGRAMME INFORMATION

BACHELOR OF ELECTRONIC ENGINEERING (SEMICONDUCTOR AND INTEGRATED CIRCUIT DESIGN) WITH HONOURS (BES)

About the Programme

The Bachelor of Electronic Engineering (Semiconductor and Integrated Circuit Design) with Honours programme is designed in alignment with the latest developments in electronic engineering, with particular emphasis on Semiconductor and Integrated Circuit Design, to equip students with the competencies required to address complex engineering problems in this field. The programme structure comprises core electronic engineering courses, specialised elective courses in Semiconductor and Integrated Circuit Design, and laboratory components that integrate experimental work and engineering practice. Specialised courses offered including semiconductor physics, VLSI integrated circuit (IC) design, microfabrication and semiconductor manufacturing processes, MEMs and nanoelectronic devices, system-on-chip (SoC) design, electronic design automation (EDA) tools, IC testing and reliability. Graduates of the programme are trained to be technically competent and professionally prepared to meet current industrial demands at both national and international levels through design-oriented laboratories, industry-relevant projects, capstone project, and final-year year project. In addition, they are equipped with essential generic skills that are applied holistically in professional engineering practice. Furthermore, the programme nurtures graduates to uphold ethical standards and professional integrity in fulfilling the needs and expectations of the global society.

Programme Structure and Assessment

This program consists of 135 credits to be completed within eight (8) semesters. Assessment of students' performance is based on formative and summative evaluation conducted throughout each semester. The short semester in Year 3 is occupied for industrial training.

Duration and Award

Duration : Full Time – Four (4) Years. Intake in October and March
Awards : Bachelor of Electronic Engineering (Semiconductor and Integrated Circuit Design) With Honours

Year 1 (Semester 1 & 2)
Occupational Safety and Health, Ordinary Differential Equations, Computer Programming, Electric Circuits I, Instrumentation and Measurement, Fundamental of Electronic Laboratory, Multivariable Calculus, Electric Circuits II, Analog Electronics and Digital Electronics.

Year 2 (Semester 3 & 4)
Creativity and Innovation, Numerical Methods, Control Systems, Signals and Systems, Programming Language for IC Design, Electronic Engineering Laboratory I, Engineering Economics and Entrepreneurship, Engineering Statistics, Electromagnetic Fields and Waves, Power Systems, Fundamental of Semiconductor, and Electronic Engineering Laboratory II.

Year 3 (Semester 5 & 6)
Engineers and Society, Microprocessor and Computer Organisation, Electronic Circuits Analysis and Design, Electronic Communication Systems, Digital Design, VLSI System, Electronic Engineering Laboratory III, Engineering Management, Integrated Design Project, Digital Signal Processing, Engineering Practices and Advanced Physical Design.

Year 3 (Short Semester – 10 Weeks)
Industrial Training.

Year 4 (Semester 7 & 8)
Final Year Project I, Elective Course I, Elective Course II, Embedded System with SoC, Micro Fabrication, Analog IC Design, Electronic Engineering Laboratory IV, Final Year Project II, Elective Course III, IC Packaging, and Microelectronic Engineering Laboratory.

Professional Accreditation
This program is recognized by the Public Service Department of Malaysia and accredited by the Malaysian Qualification Agencies (MQA) and Engineering Accreditation Council (EAC).

Career Opportunities
IC Design Engineer (Analog / Digital / Mixed-signal), Physical Design Engineer, Semiconductor Test Engineer, ASIC/SoC Design Engineer, IC Layout Engineer, Verification Engineer, Design for Testability (DFT) Engineer, Device Engineer, Application Engineer (Semiconductor), Field Application Engineer (FAE), Yield Engineer, Failure Analysis Engineer, Reliability Engineer, Production/Process Control Engineer, Post-Silicon Validation Engineer, and Development / R&D Engineer.

Commencement of Study
Twice a year in October and March

PROGRAMME EDUCATIONAL OBJECTIVES (PEO)

PEO	Statement
1	Able to build a career and become a leader in engineering fields
2	Recognised as competent engineering professionals in providing technical solutions locally or globally.
3	Contribute to society with consideration for environment and sustainable technology.

PROGRAMME LEARNING OUTCOMES (PLO)

PLO	Domain	PLO Statement
1	Engineering Knowledge (EAC 1)	Apply knowledge of mathematics, natural science, computing and engineering fundamentals, and an engineering specialization as specified in WK1 to WK4 respectively to develop solutions to complex engineering problems
2	Problem Analysis (EAC 2)	Identify, formulate, research literature and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences and engineering sciences with holistic considerations for sustainable development (WK1 to WK4)
3	Design/Development of Solutions (EAC 3)	Design creative solutions for complex engineering problems and design systems, components or processes to meet identified needs with appropriate consideration for public health and safety, whole-life cost, net zero carbon as well as resource, cultural, societal, and environmental considerations as required (WK5)
4	Investigation (EAC 4)	Conduct investigation of complex engineering problems using research methods including research-based knowledge, including design of experiments, analysis and interpretation of data, and synthesis of information to provide valid conclusions (WK8)
5	Tool Usage (EAC 5)	Create, select and apply, and recognize limitation of appropriate techniques, resources, and modern engineering and IT tools, including prediction and modelling, to complex engineering problems, (WK2 and WK6)
6	The Engineer and the World (EAC 6)	Analyze and evaluate sustainable development impacts to: society, the economy, sustainability, health and safety, legal frameworks, and the environment, in solving complex engineering problems (WK1, WK5, and WK7)
7	Ethics (EAC 7)	Apply ethical principles and commit to professional ethics and norms of engineering practice and adhere to relevant national and international laws. Demonstrate an understanding of the need for diversity and inclusion (WK9)
8	Individual & Collaborative Team Work (EAC 8)	Function effectively as an individual, and as a member or leader in diverse and inclusive teams and in multidisciplinary, face-to-face, remote and distributed settings (WK9)
9	Communication (EAC 9)	Communicate effectively and inclusively on complex engineering activities with the engineering community and with society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations, taking into account cultural, language, and learning differences
10	Project Management and Finance (EAC 10)	Apply knowledge and understanding of engineering management principles and economic decision-making and apply these to one's own work, as a member and leader in a team, and to manage projects in multidisciplinary environments
11	Life Long Learning (EAC 11)	Recognise the need for, and have the preparation and ability for i) independent and life-long learning ii) adaptability to new and emerging technologies and iii) critical thinking in the broadest context of technological change (WK8)

Study Plan

YEAR 1

Sem.	Course Code	Course Name	Credit
1	UQI10102	*Islamic Studies (local muslim)	2
	UQI10202	*Moral Studies (local non-muslim)	2
	UQI10902	**Islam in Malaysia (international)	2
	UQU11202	*Integrity and Anti-Corruption (local)	2
	UHB11002	**Malay Communication 1 (International)	2
	BEE12202	Occupational Safety and Health	2
	BEE11203	Ordinary Different Equations	3
	BEJ10102	Computer Programming	2
	BEJ10303	Electric Circuit I	3
	BEJ10702	Instrumentation and Measurement	2
	BEJ10801	Fundamental Electronics Laboratory	1
	Total		**17**

Sem.	Course Code	Course Name	Credit
2	UHB13102	English for General Communication	2
	UQU10702	*Appreciation, Ethics and Civilization (local)	2
	UQI11202	Philosophy and Current Issues	2
	UQU11802	**Malaysia Studies and Culture (International)	2
	BEE20303	Multivariable Calculus	3
	BEJ10403	Electric Circuit II	3
	BEJ10503	Analog Electronics	3
	BEJ10603	Digital Electronics	3
	Total		**18**

YEAR 2

Sem.	Course Code	Course Name	Credit
3	UQ*1XXX1	Co-Curriculum I	1
	UHB1XX02	Foreign Language	2
	BEE22402	Creativity and Innovation	2
	BEE32402	Numerical Methods	2
	BEJ20503	Control Systems	3
	BEJ20203	Signals and Systems	3
	BEJ20701	Electronic Engineering Laboratory I	1
	BEJ23002	Programming Language for IC Design	2
	Total		**16**

Sem.	Course Code	Course Name	Credit
4	UQ*1XXX1	Co-Curriculum II	1
	UHB23102	English for Technical Communication	2
	BEE22503	Engineering Economic and Entrepreneurship	3
	BEE32502	Engineering Statistics	2
	BEJ20303	Electromagnetic Fields and Waves	3
	BEJ20603	Power Systems	3
	BEJ20801	Electronic Engineering Laboratory II	1
	BEJ33103	Fundamental of Semiconductor	3
	Total		**18**

YEAR 3

Sem.	Course Code	Course Name	Credit
5	BEE32302	Engineers and Society	2
	BEJ30103	Engineering Management	3
	BEJ30701	Engineering Practices	1
	BEJ30503	Digital Design	3
	BEJ30403	Electronic Circuits Analysis and Design	3
	BEJ30103	Electronic Communication Systems	3
	Total		**15**

Sem.	Course Code	Course Name	Credit
6	UHB33102	English for Professional Communication	2
	BEE32603	Integrated Design Project	3
	BEJ30202	Microprocessor and Computer Organisation	3
	BEJ30603	Digital Signal Processing	3
	BEJ30801	Electronic Engineering Laboratory III	1
	BEJ43103	VLSI System	3
	BEJ43122	Advanced Physical Design	2
	Total		**17**

Sem.	Course Code	Course Name	Credit
	BEE32205	Industrial Training	5
	Total		**5**

YEAR 4

Sem.	Course Code	Course Name	Credit
7	BEE40602	Final Year Project I	2
	BEJ43113	Embedded System with SoC	3
	BEJ43203	Micro Fabrication	3
	BEJ43903	Analog IC Design	3
	BEJ40401	Electronic Engineering Laboratory IV	1
	BEJ4xxxx3	Elective Course I/II	3
	Total		**15**

Sem.	Course Code	Course Name	Credit
8	BEE40704	Final Year Project II	4
	BEJ43503	IC Packaging	3
	BEJ43001	Microelectronic Engineering Laboratory	1
	XXXxxxx3	Elective Course I/II	3
	XXXxxxx3	Elective Course I/II/III	3
	Total		**14**

ELECTIVE COURSES – Semiconductor and Integrated Circuit Design Specialisation

Compulsory Courses

Course Code	Course Name	Credit
BEJ23002	Programming Language for IC Design	2
BEJ30403	Electronic Circuits Analysis and Design	3
BEJ30503	Digital Design	1
BEJ33103	Fundamental of Semiconductor	3
BEJ40401	Electronic Engineering Laboratory IV	1
BEJ43001	Microelectronic Engineering Laboratory	1
BEJ43103	VLSI System	3
BEJ43203	Micro Fabrication	3
BEJ43903	Analog IC Design	3
BEJ43113	Embedded System with SoC	3
BEJ43122	Advanced Physical Design	3
BEJ43503	IC Packaging	2

Elective Course I (Choose two)

Course Code	Course Name	Credit
BEJ43303	Advanced Semiconductor Devices	3
BEJ43403	MEMS Technology	3
BEJ43603	Material Characterization	3
BEJ43703	Nanoelectronic Devices	3
BEJ43803	Reliability and Testability in IC Device	3
BEJ43133	Design for Test	3
BEJ43143	Photonic Devices	3
BEJ43303	Advanced Semiconductor Devices	3
BEJ43403	MEMS Technology	3

ELECTIVE COURSES – FOR ALL SPECIALISATION

Elective Course II (Master General)

Course Code	Course Name	Credit
MEE10103	Advanced Engineering Mathematics	3
MEE10203	Programmable Electronic	3
MEE10303	Advanced Digital Signal Processing	3
MEE10403	Computational Intelligence	3
MEE10603	Advanced Power Electronics	3

ELECTIVE COURSES – FOR ALL SPECIALISATION

Elective Course III (General)

Course Code	Course Name	Credit
EEF40103	Introduction to Big data	3
EWF40103	Data Science and Applications	3
BEE41103	HCIA Routing and Switching	3
BEE41203	HCIA Cloud Computing	3
BEE41303	HCIA Artificial Intelligence	3
UQU40103	Professional at Work	3
BEE41503	Photovoltaic	3
BEE41403	Electric Vehicles	3
EWF40203	Data Visualisation	3
EIF40103	Machine Learning	3
BEJ44173	Electrical Machines	3
BEE41603	Business Start-up and Technopreneurship	3

Synopsis of Compulsory University Courses

UHB 13102 English for General Communication

Synopsis:
This course aims to develop students' existing English Language skills. Through guided and independent learning activities, students will develop their skills in reading, listening, writing and speaking. At the end of the course, students should be able to recognize relevant information in texts on topics of interest and students should also be able to write on familiar topics. Furthermore, this course will provide students with opportunities to enhance their listening and speaking skills.

UHB 23102 English for Technical Communication

Synopsis:
This course introduces students to basic information of technical communication such as technical definition and description by using high degree of grammatical control. At this level, students will be exposed to the different types of proposal writing. In addition, students will also learn about the components of technical documents. Finally, students are also expected to execute and present an event.

Pre-requisite: A pass in English for General Communication

UHB 33102 English for Professional Communication

Synopsis:
This course equips students with the necessary English language skills to communicate effectively and professionally in workplace settings. It enhances students' written and oral communication through professional etiquette, structured meetings, and persuasive pitching techniques. Through practical exercises and real-world scenarios, students will develop confidence in writing professional documents, participating in meetings, and delivering impactful presentations. The course also emphasises interpersonal communication, active listening, and the ability to engage diverse audiences in professional contexts.

Pre-requisite: A pass in English for Technical Communication

UHB 11002 **Malay Communication I (International student only)

Synopsis:
This course is designed for international students to communicate in basic Malay in daily situations. Students are exposed to speaking and writing in simple Malay. Teaching and learning will be delivered through lecture, tutorial, assignment and indoor or outdoor experiential learning. At the end of this course, student will be able to speak and write using simple sentences effectively.

UHB 1XX02 Foreign Language

Synopsis:
Students will need to register only ONE (1) foreign language course throughout their study. Wide selection is available such as Mandarin, Spanish, Japanese, Arabic, German and French.

***All courses related to English and Foreign Language are conducted by Centre for Language Studies (CLS, UTHM). Kindly visit their website or contact for more information.*

UQI10102 Islamic Studies (local muslim students)

Synopsis:
This course explains about Islamic concept as ad-deen. It discusses the study of al-Quran and al-Hadith, Sunnism, schools of Islamic theology, development of schools of Fiqh, principles of muamalat, Islamic Criminal Law, Islamic work ethics, issues in Islamic family law and current issues.

UQI 11002 Moral and Professional Ethics (local non-muslim students)

Synopsis:
This course explains on concepts of moral, aspects of moral and its importance in daily lives, Western moral theories and moral values of great religions of the world, moral values in work and current moral issues.

UQI 11202 Philosophy and Current Issues

Synopsis:
This course will provide students a fundamental concept, the processes of formation and development of Malaysia. The topics covered include the concept of state, Malacca Kingdom, implication of imperialism and colonization, spirit of patriotism and nationalism, independence and formation of Malaysia. Besides, students will also be exposed to the constitution of Malaysia, Malaysian Government System, Economic and Social Development Policy as the main policy in the national development. At the end of the course students will able to appreciate the roles and responsibilities of a good citizen to the country.

UQU 10702 Appreciation, Ethics and Civilization

Synopsis:
This course will provide students a fundamental concept, the processes of formation and development of Malaysia. The topics covered include the concept of state, Malacca Kingdom, implication of imperialism and colonization, spirit of patriotism and nationalism, independence and formation of Malaysia. Besides, students will also be exposed to the constitution of Malaysia, Malaysian Government System, Economic and Social Development Policy as the main policy in the national development. At the end of the course students will able to appreciate the roles and responsibilities of a good citizen to the country.

UQU 11802 Malaysia Studies and Culture (International student only)

Synopsis:
This course will provide students in basic understanding of Malaysia from various perspectives. Topics to be discussed include Malaysia in relation to its history, achievement and international affairs. In addition, students will also be exposed to the ethnic composition of the country, culture and heritage. Teaching and learning process enables student to acquire knowledge and appreciates the reality of life in Malaysia through experiential learning.

Courses listed below are also part of University requirement:

UQI 11202	** Islam in Malaysia (international student only)
UQU 11202	Integrity and Anti-corruption (local students)
UQ* 1XXX1	Co-Curriculum I
UQ* 1XXX1	Co-Curriculum II

***All courses related to Social Science, Co-Curriculum and Islamic Studies are conducted by Centre for General Studies and Co-Curricula (PPUK, UTHM). Kindly visit their website or contact for more information.*

Synopsis of Mathematics Courses

BEE 11203 Ordinary Differential Equations

Synopsis:
This course is mainly about the study of mathematical concept through the use of knowledge of differential equation. First, students will be introduced the concept of differential equation including the first order differential equation, second order differential equation and system of first-order differential equations. Then, the concept of series solution for differential equations. Next, students will be introduced to the techniques of Laplace transform for solving differential equations.

BEE 20303 Multivariable Calculus

Synopsis:
This course aims to equip students with the knowledge of Functions of Several Variables, Coordinate Systems, Multiple Integrals and Vector Calculus, as the basic knowledge to support their engineering courses.

BEE 32402 Numerical Methods

Synopsis:
This course introduces several techniques to solve mathematical engineering problems using numerical estimation and requires an elementary knowledge of functions and linear algebra. It begins with an introduction to a computational method, followed by discussing the several algorithms to solve a linear and a non-linear equation. An analysis using numerical methods on differentiation and integration equations also will be introduced. Besides, an estimation technique using the extrapolation method will be taught to improve result accuracy.

BEE 32502 Engineering Statistics

Synopsis:
This course introduces the concept of statistics to be applied in engineering applications. Topics covered in this course include sampling distributions, estimation, hypothesis testing, and linear regression. Relevant software will be used to perform statistical analysis to generate conclusion based on the given data.

Synopsis of Core Faculty Courses

BEE 12202 Occupational Safety and Health

Synopsis:
This course introduces students to knowledge and skills in occupational safety and health in workplace. Scope of study includes Health, Safety and Environment Managements: Introduction to OSH, OSHA 1994 (Act 514), FMA 1967, EQA 1974, Occupational Safety and Health Management System, Safety, Health and Environment Culture; Risk Management and Assessment: Introduction to Risk Management, Risk Assessment Techniques, HIRARC; Physical Injury & Controls: Introduction to Physical Injury, Construction Work, Electrical Work, Mechanical Work, Chemical Work; Health Hazards: Introduction to Health Hazards & Hygiene, Chemical Hazards, Physical Hazards, Biological Hazards, Hygiene; Accident Investigation & Reporting: Introduction, Accident Investigation, Investigations and Causes of Incident, Incident Analysis and Data Collection Method..

BEE 22402 Creativity and Innovation

Synopsis:
This course focuses on developing a creative person who will eventually think strategically, creatively and critically. The knowledge and skills acquired throughout the course will later be applied by the students in solving problems and making decisions in the future. In this course, students will be exposed to various creativity and problem-solving techniques. Some of the skills to be covered throughout the course are problem solving, techniques in creativity and techniques in innovation. Students will also be participating in exhibition and competition. This course will also covered the industry needs by introduce them to the TRIZ concepts.

BEE 22503 Engineering Economics and Entrepreneurship

Synopsis:
This course covers topics about engineering economics and entrepreneurship. On engineering economics aspect, the course starts with the analysis of engineering economic and subsequently the principles and application of money-time relationships. On the other hand, this course considers various topics related to basic entrepreneurship including introduction to technology entrepreneurship, business plan and ownership, new product development and intellectual properties, technology commercialization and managing business.

BEE 30103 Engineering Management

Synopsis:
This course introduces students the role of engineer in management principles that are applied in engineering project and organization. Students learn the basics of managing people and responsibilities as an engineering manager. The management functions consists of planning, organizing, leading and controlling also the management tools which comprises of taguchi, kaizen, enterprise resource planning (ERP) and six-sigma are exposed to the students. Other elements such as quality management, project management and its activities, lean production, maintenance and reliability are also included in this course.

BEE 32302 Engineer and Society

Synopsis:

To provide knowledge and understanding about the importance of ethics in the engineering profession, and to develop qualities and skills required by engineers to perform their roles and responsibilities competently for the benefit of mankind and nature.

Synopsis of Core Programme Courses

BEJ 10102 Computer Programming

Synopsis:
This course provides comprehensive programming concepts through the use of high-level programming languages such as C language. After completing this course, student should be able to design, code, debug, test and document well-structured programs based on technical or real engineering problems.

BEJ 10303 Electric Circuits I

Synopsis:
This course covers the basic theory of circuit analysis. Topics include basic electrical circuit theory and laws, electrical circuit analysis techniques and concepts, network theorems, review of techniques to solve simultaneous equations, nodal and mesh circuit analysis, dependent sources, Thevenin’s and Norton’s equivalent circuits, and maximum power transfer.

BEJ 10403 Electric Circuits II

Synopsis:
The course has been designed to apply the techniques and principles of electrical circuit analysis to solve DC and AC circuits. Topics in this course includes energy storage elements, transient and steady-state responses of RC, RL and RLC circuits; complex impedance, circuits with DC and sinusoidal sources, steady-state power and power factor correction. Two-port network topic is also introduced for advanced circuit analysis.

Pre-requisite: BEJ 10303 Electric Circuits I

BEJ 10503 Analog Electronics

Synopsis:
This course provides the fundamental knowledge in analog electronic. It encompasses basic electronic semiconductor devices such as diode, bipolar junction transistor (BJT), field effect transistor (FET). The emphasis is on the design aspects and applications which include the amplifier design based on single and multi-stage, frequency response analysis of amplifiers, and power amplifier. The course has been designed to provide basic analog electronic skills covering theories and practices.

Pre-requisite: BEJ 10103 Electric Circuits I

BEJ 10603 Digital Electronics

Synopsis:
The course begins with the introduction to digital systems, followed by representation of physical values in digital form. The basic logic gates and symbols are introduced covering Boolean expressions, truth tables and timing diagrams. Combinational logic gates is implemented in certain function, analyzing circuits to obtain its Boolean expression followed by logic simplification using Boolean theorem and Karnaugh-map approach. In digital arithmetic system, adder circuits are introduced, starting from half adder, full adder and the design of the carry look-ahead adder and BCD adder. Then, on to MSI logic circuits such as encoder, decoder, multiplexer and demultiplexer. Memory elements such as latches and flip-flops are introduced followed by the related flip-flop applications.

BEJ 10702 Instrumentation and Measurement

Synopsis:

This course is about the work principles of various measuring instruments. The students are first introduced with bridge measurement. Next, types of sensors and transducers, their characteristics and applications are discussed. Application of measurement systems is also dealt with. Finally, the students are taught about the digital instrumentation components.

BEJ 10801 Fundamental Electronics Laboratory

Synopsis:

This course comprises of practical implementation for the subject of BEJ 10303 Electric Circuits I and BEJ 10702 Instrumentation and Measurement, as well as introductory to electronic laboratory practice.

References:

BEJ 20203 Signals and Systems

Synopsis:
This course is an introduction to signals and systems. It is important for students to gain good understanding on the characteristics of signals and systems in time and frequency domains. The topics of this subject are Introduction to Signals and Systems, Fourier series, Fourier Transform, and Laplace Transform. In each topic, the concepts will initially be presented followed by the applications. It is expected that the students should be able to apply the knowledge and experience gained in this subject for better understanding of courses at higher levels.

Pre-requisite: BEE 11203 Ordinary Differential Equation
BEJ 10303 Electric Circuits I

BEJ 20303 Electromagnetics Fields and Waves

Synopsis:
This course is to introduce the fundamental of electromagnetic including electrostatic, magnetostatic and electromagnetic waves. The main laws governing the electrostatic and magnetostatic will be discussed thoroughly.

Pre-requisite: BEE 20303 Multivariable Calculus

References:

1 Element of Electromagnetic, Matthew M.O.Sadiku, 4th Edition, Oxford University Press, 2001 (Repr. 2003).Call Number: QC760.S324 2007.

BEJ 20503 Control Systems

Synopsis:
This course is about fundamental concepts of solving control systems problem. This course is organised in seven chapters. Chapter 1 presents an introduction to control systems. Chapter 2 provides introduction to Laplace transforms, transfer function, and mathematical modelling of dynamical systems (mechanical, electrical and electronic systems). Chapter 3 presents stability analysis of control systems and followed with chapter 4 which describes the time domain analysis of control systems. Chapter 5 and chapter 6 treats root locus method and frequency domain analysis respectively to analyze control systems while Chapter 7 deals with the basic properties of controllers including PID controller design.

Pre-requisite: BEE 11203 Ordinary Differential Equation

BEJ 20603 Power Systems

Synopsis:
This course is arranged to provide students understanding of electrical power systems. The course is divided into three major parts: fundamental of single-phase and three-phase systems, the essential basic knowledge of single-phase and three-phase power systems will be covered at the beginning of the course. Subsequently, electric utility system comprises all the sources for power generation, accessories and auxiliaries used in it, transmission, and distribution of electric energy is also covered this section. Finally, the protection system will cover the safety and reliability of a power system.

Pre-requisite: BEJ 10303 Electric Circuits I

BEJ 20801 Electronic Engineering Laboratory II

Synopsis:
This course comprises of practical implementation for the subject of Power System and Control System Theory. Various experiments are covered such as generator and transformer, overhead line, short circuits asymmetrical analysis, protection system, power factor correction, position control system, speed control system and servo system.

BEJ 30103 Electronic Communication Systems

Synopsis:
This course introduces the fundamentals in analog and digital communication systems. Comprises of analysis of signals and noise, generation of analog and digital modulation schemes, transmission lines, antenna and wave propagation as a part of a complete system in communication. Finally, the topic discussed relate with current application in communication systems.

BEJ 31303 Microprocessor and Computer Organisation

Synopsis:
This course provides an introduction to microprocessor systems and computer organisation with a focus on modern microprocessor architecture. The course covers the principles of microprocessor design, system architecture, and the use of modern tools to implement and experiment with microprocessor-based systems. Students will gain experience with programming and interfacing peripherals using the learned processor system.

BEJ 30603 Digital Signal Processing

Synopsis:
This course aims to introduce the main concepts of digital signal processing, review of discrete signal and system, characteristic and operation, discrete convolution, sampling and quantization, discrete Fourier transform, z-transform and the implementation of digital filters.

Pre-requisite: BEJ 20203 Signals and Systems

References:

BEJ 30701 Engineering Practices

Synopsis:
The course is developed to give the required knowledge of:
1 Domestic electrical wiring and installation. It will develop the capability of carrying out electrical wiring activities up to a certain level of competency. The topics covered are the domestic wiring and installation.
2 Designing of electronic circuit's aspects, Proteus software will be used as it will help in making the schematic entry, signal simulation and printed circuit board layout. Soldering technique will be introduced to create a skill in prototype produce aspect.
3 PLC will be used to provide the programming knowledge for the controlling of the basic and advance automation system.

BEE 32205 Industrial Training

Synopsis:
The course aims to provide an opportunity for students to undergo practical in working sector especially engineering field, technology and management as well as to enhance professional skills and interpersonal skills.

Pre-requisite: At least 60% of the total credits have been completed.

References:
Buku Log Latihan Industri UTHM (Bahagian A), Pejabat Penerbit, UTHM.

BEE 32603 Integrated Design Project

Synopsis:
This course introduces students with the principles of integrated electrical and electronic engineering design project based on a given theme. It involves teamwork, project management, engineering design and technical presentation in a driven environment. Each team is expected to address problem statement, survey, design, analysis, evaluation and revision of design towards engineering problem solution. The students have to ensure that the proposed project meets the need of end users with appropriate considerations for public health and safety, cultural, societal, economy and environmental.

Pre-requisite: Student has to complete minimum 70 credit hours

BEE 40602 Final Year Project I

Synopsis:
This course is the first part of an individual project during final year of study based on a topic selected from the subjects studied or a related engineering problem. Each student is expected to present his proposal and research in addition to a progress report during the first seminar of the final year project.

Pre-requisite: Student has to complete minimum 90 credit hours

References:
1 Guidelines for the Implementation of Final Year Project in the Faculty of Electrical and Electronics Engineering UTHM.
2 Guidelines for thesis writing.
3 A guide to technical report writing, The Institution of Engineering and Technology (IET).
4 Final year project, The Institution of Engineering and Technology (IET).

BEE 40704 Final Year Project II

Synopsis:
This course is the second part of an individual project during final year of study based on a topic selected from the subjects studied or a related engineering problem. Each student is expected to present result of his/her final year project.

Pre-requisite: BEE 40602 Final Year Project I

References:
1 Guidelines for the Implementation of Final Year Project in the Faculty of Electrical and Electronics Engineering UTHM.
2 Guidelines for thesis writing.
3 A guide to technical report writing, The Institution of Engineering and Technology (IET).
4 Final year project, The Institution of Engineering and Technology (IET).

Synopsis of Specialisation Courses
(Semiconductor and Integrated Circuit Design)

BEJ 23002 Programming Language for IC Design

Synopsis:
This course provides an in-depth introduction to essential programming languages and tools for Integrated Circuit (IC) design. Students will gain practical experience with Linux, Shell programming, Bash, TCL, and PERL, which are critical for automating design processes and enhancing productivity in IC design workflows.

References:

BEJ 30403 Electronic Circuits Analysis and Design

Synopsis:
Fundamental concepts of analog electronics and the application of these concepts to the design and analysis of analog circuits. Among the topics covered are the fundamentals of operational amplifiers, linear and non-linear applications of operational amplifier, active filters, feedback, oscillators and timers, and regulated DC power supply. The focus is on the design and analysis of analog circuits. A simulation of a design using a computer simulation software will be used before circuit implementation is done..

BEJ 30503 Digital Design

Synopsis:
This course introduces students to digital logic design, progressing from basic combinational and sequential logic to advanced topic such as processor design. The course focuses on Register-Transfer Level (RTL) design using hardware description language HDL, with practical implementation on FPGA boards. Students will learn to design, verify, and test digital circuits, culminating in the development of a simple processor.

BEJ 33103 Fundamental of Semiconductor

Synopsis:

This course deals with the analysis and fundamentals of semiconductor physics involving the applications and devices. It starts with the energy bands and carrier concentration of semiconductor materials. It is followed by the carrier transport phenomena in the semiconductor. Next, p-n junction is introduced as the basic building block of semiconductor devices. The last chapters explain the basic semiconductor devices; MOSFET.

BEJ 40401 Electronic Engineering Laboratory IV

Synopsis:

This course is intended to introduce the practicum of microprocessor and computer organization which emphasis on software and hardware simulation. The students will learn the organization of a computer and microprocessor; write programming codes to control the operation and learn how to verify it using simulation software before implementing into the hardware.

BEJ 43103 VLSI System

Synopsis:

The course will introduce the principles and practices of Very-Large-Scale Integration (VLSI) technology in complementary metal oxide semiconductor (CMOS) technology focusing on the design and implementation of integrated circuits (ICs). Its covers the fundamental of CMOS logic circuits, layout, optimization techniques as well as the crucial parameters to be considered in any VLSI system design. Students will be introduced to Electronic Design Automation (EDA) design tools to help in designing VLSI circuit.

BEJ 43203 Micro Fabrication

Synopsis:
This course provides students the comprehensive knowledges on Artificial intelligent techniques applied to control system design. Topics include Neural Networks, Fuzzy Logic and Bayesian Networks (Kalman Filter and Particle Filter) and how to design such controller using Engineering Software.

BEJ 43903 Analog IC Design

Synopsis:
This course provides a comprehensive introduction to the principles and techniques of analog integrated circuit (IC) design. Students will explore the fundamentals of MOS transistors, design and analysis of single-stage and differential amplifiers, and operational amplifiers. Other topics include the fundamental analog circuit topologies, concepts and essential ICs layout design techniques. The course also delves into operational amplifiers, highlighting their configurations, applications, and key parameters.

BEJ 43113 Embedded System with SoC

Synopsis:
This course provides an in-depth understanding of embedded systems within System on Chip (SoC) architectures, focusing on programming and I/O methodologies using Embedded Linux on an embedded processor in the SoC-FPGA. Students will learn the theoretical and practical concepts in SoC by exploring the I/O in embedded systems, device drivers, hardware-software integration, real-time systems and latest advanced topics in embedded systems.

BEJ 43122 Advanced Physical Design

Synopsis:
This course covers the concepts and techniques involved in the physical design of Integrated Circuits (ICs). Topics include the physical implementation of RTL code, automatic place and route, clock tree synthesis, routing with signal integrity, formal verification, parasitic extraction, ECO flow, UPF for low power designs, static timing analysis, and layout verification. Students also will be introduced to the industry-standard tools and methodologies to prepare for careers in IC design.

Elective Course I
(Semiconductor and Integrated Circuit Design)

BEJ 43303 Advanced Semiconductor Devices

Synopsis:
This course starts with the analysis of bipolar transistor and variations of FET in term of their structure and operation. It is followed by analysis of multi-gate transistors in terms of their unique features. Next, analysis of several microwave diodes are also covered in term of their basic structure and operation. Finally, analysis of power devices and its application is presented.

Pre-requisite: BEJ 33103 Fundamental of Semiconductor

BEJ 43403 MEMS Technology

Synopsis:
This course introduces students to the multi-disciplinary and exciting field of MicroElectroMechanical Systems (MEMS). It teaches the introduction to MEMS, MEMS material and mechanical properties, methods of fabrication, design approach, applications of microsensors & microactuators as well as microfluidics. The course emphasizes teamwork and active learning. Students work together on using simulation and fabrication facilities to build simple MEMS structures.

BEJ 43603 Material Characterization

Synopsis:
This course introduces the surface and material characterisation techniques related to bonding surface. Surface analysis is use of microscopic associated to the optical, chemical and physical probes that give information about the surface region of a sample. Most of the techniques used probe surface utilized the electrical measurements setup, emission and absorption spectroscopy analysis and as well as the

nature electromagnetic radiation. The basic concept of reliability concern and failure analysis of a semiconductor sample is also introduced that deals with the sample preparation, electrostatic discharge mechanism and electromigration.

BEJ 43703 Nanoelectronic Devices

Synopsis:

This course introduces the fundamental of nanotechnology. It covers the nanoscale processing, the fabrication of nanostructures for advanced device applications and to understand the techniques for the characterisation of device structures made on the nanoscale. The last part covers about the introduction to advanced devices and as a part of practical aspect, students will also be required to conduct a project on device modelling and simulation using any related simulation tools.

BEJ 43133 Design for Test

Synopsis:
This course provides an in-depth understanding of Design for Testability (DFT) principles and techniques. Students will learn how to design and implement testable circuits, focusing on various DFT strategies and methodologies. The course covers scan insertion, Automatic Test Pattern Generation (ATPG), and testing techniques for advanced semiconductor technologies.

Pre-requisite: BEJ 33103 Fundamental of Semiconductor

BEJ 43143 Photonic Devices

Synopsis:
This course is about the fundamental of photonic devices and consists of six chapters. Students will learn on semiconductor photonic materials and properties, light emitting diodes, photodetectors and photovoltaic devices. The course will concentrate on the properties of photonic material, design structure, characterization, fabrication process and application of photonic devices.

MEE 10203 Programmable Electronics

Synopsis:
The course introduces the digital hardware design concepts and the modelling using HDL to synthesize of digital circuits using Programmable Logic Technology. Students will expose to the state of the art of Programmable Logic Technology. Students also learn the development, synthesis and modelling of Combinational Circuits, Sequential Circuit, Finite State Machine, RTL design and the testing approaches on the circuits.

MEE 10303 Advanced Digital Processing

Synopsis:
This subject is to introduce the advance concepts in digital signal processing, to demonstrate its applications and implementation constraints and introducing the real-time DSP using MATLAB tools

References:

1 Analog and Digital Signal Processing, Ashok Ambardar, 2nd Ed, brooks/Cole, 1999
2 Discrete-Time Signal Processing, Alan V. Oppenheim, Ronald W. Schafer, 2nd Ed, Prentice Hall, 1999.

MEE 10603 Advanced Power Electronics

Synopsis:
This subject will discuss a review of electrical fundamentals of power electronics devices concepts of PWM modulation techniques apply in power semiconductor switches. The student also will be discussed in details about Diode Rectifiers, Thyristor-Based Rectifiers, DC to DC Converters, DC to AC Converters, AC to AC Converters in three phase system. As at the end, utility Applications of Power Electronics in alternative energy application.

Synopsis of Specialisation Courses
(Elective Course III – General)

BEE 41103 HCIA Routing and Switching

Synopsis:
Huawei (HCIA) Routing & Switching: network fundamentals, Ethernet, various protocols such as those used in routing, and Huawei's own VRP operating system that covers all essential aspects of HCIA certification. Presenting routing and switching basics in depth, it is a valuable resource for information and communications technology (ICT) practitioners, university students and network technologist.

References:

4 B. Sklar, Digital Communications: Fundamentals and Applications, Prentice Hall, 1988
5 Nalin K.Sharda, Multimedia Information Networking, Prentice Hall, 1999

BEE 41203 HCIA Cloud Computing

Synopsis:
uawei HCIA-Cloud Computing course is aimed at introducing the basic of cloud computing, as well as how to use virtualization technology to realize the basic characteristics of cloud computing. This course covers the introduction of Cloud Computing and virtualization, storage, network in Cloud Computing, virtualization features and development trend of Cloud Computing, which are valuable resources for information and communications technology (ICT) practitioners, university students and network technologist.

References:

1 Huawei Technologies Co. Ltd, HCNA Networking Study Guide, Springer, 2016

BEE 41303 HCIA Artificial Intelligence

Synopsis:
Huawei HCIA-AI course is aimed to introduce the basic of artificial intelligence (AI), as well as understand the AI development history. This course covers the AI, Machine Learning and Deep Learning overview, mainstream development framework for AI, Huawei AI development framework, Huawei AI Computing Platform, Huawei AI platform for smart devices and Huawei Cloud Enterprise Intelligence application platform. This course contents are valuable resources for those who are interested in learning how to build and manage AI for commercial needs, ICT practitioners, university students and network technologist.

BEE 41403 Electric Vehicles

Synopsis:

This course introduces the fundamental concepts, principles, components and control of electric vehicles. This course goes deeper into the various aspects of the electric drive-train, such as the technologies, configuration, types of electric machines, energy storage devices, and electric vehicle control. Each topic is developed in logical progression with the latest information.

5 Power electronics and electric drives for traction applications/ edited by Gonzalo Abad. Call number: TJ1095.P68, 2017.
6 Modeling power electronics and interfacing energy conversion systems / M.Godoy Simoes and Felix A. Farret. Call Number: TK7881.15. S55, 2017.

BEE 41503 Photovoltaic Systems

Synopsis:

The course has been designed to introduce the technology of solar photovoltaic engineering and grid-connected photovoltaic (GCPV) design. The main topic of this course consists of basic solar engineering, photovoltaic technology, GCPV system design, performance evaluation, operation and maintainance. The GCPV design software and related national and international standards are also discussed in this course.

BEE 41703 Business Start-up and Technopreneurship

Synopsis:
This course introduces students to the fundamentals of technopreneurship, guiding them from idea generation to startup launch. Covering design thinking, business structures, financial planning, intellectual property, and digital marketing, it emphasizes hands-on learning through workshops, case studies, simulations, and field visits. The course culminates in a Demo Day where students pitch and showcase their Minimum Viable Products (MVPs), preparing them to navigate Malaysia's startup ecosystem with innovation and entrepreneurial confidence.

BEJ 44173 Electrical Machines

Synopsis:
The principles of electrical engineering are fundamental to understanding the operations and characteristics of various AC and DC circuits and machines. This course provides a comprehensive study of electrical systems, including transformers, AC and DC machines, and generators. Through this subject, students will gain the skills and knowledge necessary to analyze and solve real-world electrical engineering problems across different industries, preparing them for challenges in the modern electrical and industrial environment.

EFF 40103 Introduction to Big data

Synopsis:

Big Data is a term used to describe a collection of data that is huge in size and yet growing exponentially with time. In short, such data is so large and complex that none of the traditional data management tools are able to store it or process it efficiently. This course provides knowledge on how to handle and manage big data.

EIF 40103 Machine Learning

Synopsis:

Data visualisation is the graphical representation of information using visual elements like charts, graphs, maps, dashboard and etc. Data visualisation tools such as Tableau and Microsoft Power BI provides an accessible way to see and understand trends, outliers, forecast and patterns in data.

EWF 40103 Data Science and Applications

Synopsis:
In this course, student will learn how to leverage on data to unlock new economic value for your business, as well as apply useful data science concepts to every aspect of your daily life from personal finances, to reading, lifestyle habits, and work decisions. This course will combine a good balance of theoretical knowledge and practical application where students will learn the processes of gathering, cleaning and handling data and learning big data concepts by using case study references to reinforce learning.

UQU40103 Professional at Work

Synopsis:
The Professional at Work course is designed to improve the ability of students to develop their technical skills in professionalism, social responsibility, and environmental sustainability. Nurturing and empowering the student with these skills could enhance the student's professionalism prior to entering the workspace. The philosophy of the course is ongoing, systematic, and aimed toward a fulfilling work life, which is part of their overall plan for personal development. This course includes an introduction to professional practice, ethics, legal, innovation and infrastructure, social responsibility, and professional environment. Also, this course was developed by referring to Sustainable Development Goals (SDG) and Politic, Economy, Social, Technology, Environment, and Legal (PESTEL) guidelines. Particularly, students will propose a suitable community service project that deals with local/community issues that lead to professional practices.

Career and Further Education Prospect

Graduates of the Bachelor of Electronic Engineering (Semiconductor and Integrated Circuit Design) with Honours are equipped with strong technical knowledge and practical skills in electronic engineering, embedded systems, analog and digital IC design, semiconductor device physics, VLSI systems, fabrication processes, IC packaging and testing, and industry-standard design tools. The program prepares students to meet the challenges and demand of semiconductor ecosystem by equipping them with strong technical expertise, hands-on design experience, problem-solving skills, and industry-relevant knowledge aligned with both local and global semiconductor advancements.

Upon graduation, students will have excellent opportunities to pursue professional careers in a wide range of electronic and semiconductor industries which includes advanced packaging, testing, and design service. With strong technical competencies and hands-on laboratory experience, graduates may pursue professional roles as IC Design Engineer (Analog / Digital / Mixed-signal), Physical Design Engineer, Semiconductor Test Engineer, ASIC/SoC Design Engineer, IC Layout Engineer, Verification Engineer, Design for Testability (DFT) Engineer, Application Engineer (Semiconductor), Field Application Engineer (FAE), Yield Engineer, Failure Analysis Engineer, Reliability Engineer, Production/Process Control Engineer, Post-Silicon Validation Engineer, Development Engineer, and R&D Engineers.

Nevertheless, the room for continuing studies is always available. The programme also provides a solid foundation for further education, enabling graduates to continue postgraduate studies at the Master or PhD level in specialised areas such as IC Design, embedded system, failure analysis, materials synthesis, characterization, advanced fabrication, nanotechnology, and electronic engineering. This ensures graduates to drive innovation, remain competitive and adaptable in supporting high-value semiconductor manufacturing, and strengthen the global competitiveness of the semiconductor industry.
